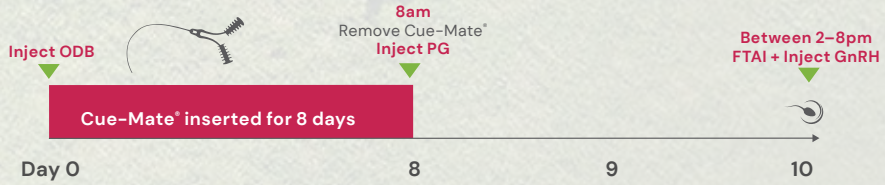
Beef Cattle Protocols 2023 / 24

Repro 360° by vetoquinol

The protocols outlined below are some of the more common ones recommended by the Repro360 team at Vetoquinol Australia.

GnRH – Gonadorelin releasing hormone
ODB – Oestradiol benzoate
PG – Prostaglandin F2α

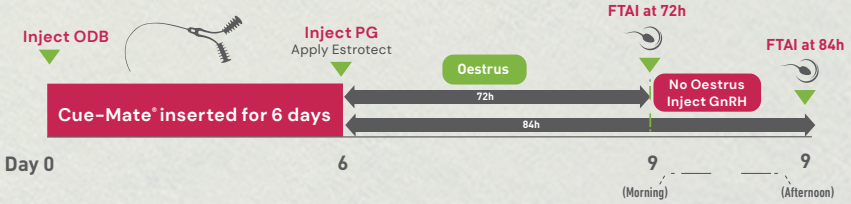
FTAI – 8 Day Cue-Mate®



A commonly used **FTAI protocol**, that provides the benefit of only three handlings. Best suited to *Bos taurus* genotypes. A popular choice for the commercial cattleman that have ease of management as a high priority. Suitable on properties that don't have EU accreditation.

J-Sync – with aided heat detection

ESTROTECT BREEDING INDICATOR



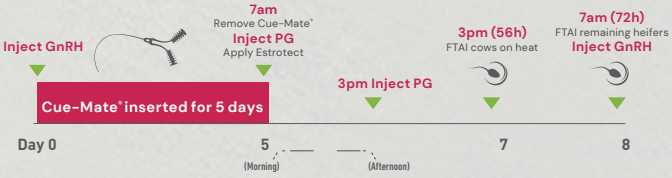
A protocol for the astute cattle breeder that is interested in utilising **sex-sorted semen** or wants **optimal results** in their herd. Females with a rubbed **Estrotect** at the 72h FTAI will have higher fertility than females at the 84h FTAI, providing the option for different choice of semen at each insemination.

Protocols suitable for EU accredited herds

ESTROTECT BREEDING INDICATOR

HEIFERS – FTAI with aided heat detection

COWS – FTAI with aided heat detection



This **FTAI protocol** uses **Estrotect** to aid in heat detection to improve accuracy of FTAI time. Females with rubbed Estrotect at the first FTAI will have higher fertility than females at the second FTAI providing the option for different choice of semen at each insemination. Note the use of 2 x PG injections in the Cow Protocol, this is an important step for optimal fertility. Simple FTAI protocols for EU producers are available.
